CLEAN**

What is Melamine Furniture?

Melamine furniture is constructed from a manufactured-wood substrate, like MDF (medium density fiberboard) or plywood, that has been covered in melamine laminate. The melamine resin gives these otherwise lower-quality materials a very durable and attractive finish! This is what makes melamine furniture, like cabinets, **office desks**, and **display counters**, so popular! While 100% real wood furniture pieces have their benefits, in many cases using melamine laminated furniture is the most cost effective, lightweight, and convenient choice.
